## Ruggedized SCADA-Aware Router Gateway

- Compact ruggedized SCADA-aware router gateway for serial and Ethernet devices, supporting IEC-101, IEC-104, Modbus, and DNP3 protocols
- Resilient 3G/HSPA+/LTE cellular network uplink for maximum service continuity with multi-service Ethernet and Serial (RS-232/RS-485) interfaces
- Stateful Firewall
- IEC 61850-3/IEEE1613 design
- Withstands harsh environment

SecFlow®-1 is an Ethernet router gateway, a member of RAD's SecFlow suite of ruggedized Ethernet products.

With a unique built-in packet processing SCADA-aware engine, it fits mission-critical industrial applications. It is most suitable for infrastructure at utility companies with remotely distributed sites, connected to a SCADA control center. SecFlow-1 is installed at remote locations, forwarding Ethernet or serial traffic over fiber optic or cellular links.

SecFlow-1 features one FE UTP port and one GbE SFP port, two serial RS-232 ports or one RS-232 plus one RS-485, and a cellular modem with two SIM cards for maximum link resiliency.

SecFlow-1 utilizes Ethernet ports for new IEC 61850 compliance IEDs for automation in substations.

SecFlow-1 is equipped with serial interfaces for connectivity of legacy RTUs with new IP-based IEDs. SecFlow-1 gateway converts legacy IEC-101 protocol to IP-based IEC-104, enabling seamless communication from the IP SCADA to both the old and new RTUs. This provides a single box solution for multi-service applications and smooth migration to all-IP networks.

The gateway is designed for installation under harsh environmental conditions. It features DIN-rail mount, IP30 protection level, wide operating temperature range (-40°C to 70°C) without fans, and EMI immunity (IEC61850-3, IEEE1613, and EN50121-4).

### MARKET SEGMENTS AND APPLICATIONS

SecFlow-1 addresses the following Industrial IOT:

- Distributed automation in secondary substations
- Smart meter concentration
- Water Resources Management
- Retail
- Out-of-band management using cellular uplink

### INTEROPERABILITY

SecFlow-1 operates with SecFlow-2.

### ROUTER AND VPN SERVICES

SecFlow-1 features static routing, OSPF, BGP, VRF and NAT.

The device features a VPN gateway with two operation modes:

## SECFlow

- Inter-site connectivity using IPSec tunnels
- Remote user access, using SSH

Inter-site VPN based on IPSec encrypted link ensures L3 transparent connection of the Ethernet networks sites.

For remote access, the router uses an SSH-encrypted tunnel, with user authentication and specific access authorization.

### MANAGEMENT

The device can be managed via the SecFlow web-based interface.

SecFlow-1 also supports a variety of access protocols, including CLI, Telnet, and TFTP.

### Stateful Firewall

Based on pre-defined rules, the stateful firewall monitors and manages all the traffic passing through the device. Packets that are out of communication context or not allowed are dropped, and the relevant events are reported to the management system.
